88th Annual

Membership Appreciation Meeting

Thursday, October 8 | 6 p.m.

Great Food • Door Prizes • Business • Your Cooperative

Official Notice

You are hereby given official notice that the annual meeting of CECA will be held at the cooperative's headquarters in Comanche at 6 p.m, Thursday, October 8, 2026.

At the meeting, one member from District 2 & 4 is to be elected director for a three year term, and other business that might come before the meeting may be discussed.

We urge you to be present for this meeting Thursday, October 8, at 6 p.m. at CECA's headquarters at 349 Industrial Blvd.

Registration and dinner begin at 5:15 p.m., and the event will conclude before dark.

Pete McDougal

Nominees

At the District 2 & 4 meeting, the following candidates were nominated for the CECA Board of Directors:

Pete McDougal

The meeting for District 2 was held July 21 at the CECA headquarters in Comanche. A quorum was present, and members nominated incumbent Pete McDougal to continue to serve on the Board of Directors.

Monty Carlisle

The meeting for District 4 was held July 23 at the Mullin First Baptist Church. A quorum was present, and members nominated incumbent Monty Carlisle to continue to serve on the Board of Directors.

The most lightweight and stylish folding mobility scooter is redefining independence

Whether exploring abroad or handling your daily routine, the ATTO SPORT keeps you moving.

Everyday Freedom

Mobility scooters keep you independent, making daily life easier and more enjoyable. From errands to visiting friends, they help you stay active and connected. Mobility scooters open new opportunities and let you enjoy life your way.

Life Without Limits

Folding mobility scooters offer a lightweight, compact design that fits in car trunks, on planes, and cruises. They are easy to store and perfect for travel and everyday use. Whether exploring new places or handling errands, folding scooters provide convenience, independence, and the freedom to go anywhere.

The ATTO SPORT folding travel scooter delivers a perfect blend of style, innovation, and performance. It is designed for those who value independence and sophistication

Compact Convenience

The ATTO SPORT transforms effortlessly from a full-sized scooter to a compact trolley in seconds, making it perfect for travel, quick storage, and easy transport wherever life takes you.

Effortless Portability

The ATTO SPORT's innovative design separates into two lightweight parts, with the heaviest **weighing only 37 lbs.** It's easy to lift, store, and transport in the trunk of a car.

Unmatched Comfort

The ATTO SPORT has an ergonomic and adjustable seat and handlebars, crafted to ensure a smooth ride every time, even on longer journeys.

Sleek and Stylish

The ATTO SPORT redefines mobility with a sporty, elegant design that looks as great as it feels. Its modern aesthetic and 3-wheel agility let you navigate tight spaces, and it is equipped with **electronic stability control for added safety on descents and turns.**

Airline Approved Battery

The ATTO SPORT is equipped with a TSA-approved battery. Its compact size and optional split mode make it the only mobility scooter that can fit in the aircraft's overhead compartment.

Reliable for Every Adventure

With a driving range of up to **12.5 miles** (extendable to **25 miles** with the XL battery), a **6.2 MPH top speed**, a **weight capacity of 300 lbs**, flat-free, shock-absorbing tires, and **4-inch ground clearance**, it is ideal for air travel and outdoor exploration and built for longevity.

Front and Rear Lights

ATTO SPORT's powerful front and rear LED lights enable riding in dark conditions.

It's Never Too Soon

Time waits for no one, so why should you? There's no better time to reclaim your mobility and make the most of every moment.

Don't wait! Call now and buy your ATTO SPORT and receive a free front/rear basket and phone holder, a \$184 value.

Why Choose Movinglife?

- Free in-home demos
- Exceptional service
- Flexible payment plans
- Expert Technicians
- Multi-location service network
- Industry's most comprehensive warranty
- Personalized solutions
- Trusted by 60,000+ users
- Global showrooms & service in 62 countries

Speaking of Long Commutes
By Erica Flocke

Among the Trees

Big Jake, the mascot of the Texas State Forest Festival, demonstrates ax throwing.

WHEN THE FOUR-DAY Texas State Forest Festival kicks off September 17 in Lufkin, it continues a tradition that began in 1938. The event, in the heart of the Pineywoods, features a variety of activities, including a carnival, barbecue competition, music and chain saw carving.

In 2022, Texas sawmills produced enough lumber to make two-by-fours that could reach the moon and back.

Did you know? Texas has 59 million acres of forestland, more than any other state except Alaska. About 93% of that is privately owned.

Hair Apparent

Only five elected American Presidents—John Adams; John Quincy Adams, right; Martin Van Buren; James Garfield; and Dwight Eisenhower—were bald or balding. Considering that 85% of men suffer hair loss by age 50, that's perhaps an astonishing record. Something to think about on **National Bald is Beautiful Day, September 13.**

MAKING **SPACE** FOR EVERYONE

BY MELISSA GASKILL • PHOTOS BY TIFFANY HOFELDT

THIS PAGE The wonders of the night sky are always accessible at the Burke Baker Planetarium in Houston.

OPPOSITE, FROM TOP With more than a dozen planetariums around the state, visitors have access to celestial sites that can stir the imagination. Burke Baker was one of the first planetariums in Texas when it opened in 1964.

Light pollution blotting out the stars? Head to your local planetarium

In the 1950s, Harlingen Air Force Base used a domed planetarium building to teach pilots navigation by the stars. When the base closed in 1962, the building was donated to what is now the University of Texas Rio Grande Valley, and it eventually fell into disrepair.

But in 2008, H-E-B funded renovations that added a digital projector system and, in 2012, a new dome. Now regular folks of all ages can visit and get a front-row seat to the stars in Edinburg.

“H-E-B asked that it be free and open to the public,” says Christian Hernandez, program specialist at the UTRGV planetarium. “They wanted to inspire a new generation, and I think they made good on that desire.”

The Milky Way shines high above in September, with the constellation Pegasus rising in the east. Venus will be bright in early evening, with Jupiter most visible at dawn. But if it’s cloudy or you live near a big city or industry, you won’t be able to see any of it.

At a planetarium, you can enjoy these constellations and planets as well as other astronomical wonders from a comfy chair with no worries about light pollution from cities or satellites, cloudy skies, heat or cold, bugs, or the hard ground. And in Texas—with at least 15 permanent planetariums

across the state—chances are good that there’s one just down the road from you and with technological advances you might not expect.

Space Over Time

The first modern planetarium opened in Munich, Germany, in 1925, displaying 4,500 stars and the planets of our solar system. Five years later, the first facility in the U.S., the Adler Planetarium, opened in Chicago. More quickly followed in Philadelphia, Los Angeles and New York City. Texas got its first, Fort Worth’s 40-foot-diameter Noble Planetarium, in 1955, and soon Houston and Abilene had their own.

Planetarium popularity soared after the Soviet Union’s Sputnik 1 satellite launched in 1957 and during the 1960s race to the moon. These days, as artificial light drowns out more of the night sky, folks flock to planetariums to see what they’re missing outside.

Those early planetariums used mechanical star projectors that beamed light through slides patterned with tiny holes to depict celestial bodies on a domed ceiling. Gears and motors simulated the movements of stars and planets, creating astonishingly realistic night skies.

Such machines, made by Zeiss, a German company that produced the original Munich projector, and Pennsylvania-based Spitz Laboratories, which developed its first system in the 1940s, remain in use at many planetariums.

But now most facilities have digital projector systems that

Sunset at the Burke Baker Planetarium, where, indoors, it can always be nighttime.

“Under the dome, phenomena that can seem abstract or distant become tangible and awe-inspiring. It’s like a time machine, looking back at how the universe was.”

blend multiple high-resolution images into an uninterrupted scene covering the entire dome. These systems can produce the likenesses of millions of stars and extremely detailed 3D objects and events in deep space. Advances in sound and control systems and improved dome surfaces help make planetarium experiences even more immersive and realistic.

For example, the Stephen F. Austin State University Planetarium in Nacogdoches, which opened in 2018, features a state-of-the-art 4K Digistar system, says Director Dan Bruton.

Abilene’s Morgan Jones Planetarium upgraded in 2004 from its original Spitz Star Projector to a digital projector, says Jason Barber, planetarium director, and in 2019, it installed a laser system.

“With modern projectors, you can go into the stars, you can model the entire Milky Way,” Barber explains. “It’s kind of like a video game, but the shape of a dome creates a 3D effect, so you feel like you’re there. It’s like being in a spaceship.”

Beyond Space

Nowadays, planetarium experiences go well beyond tours of the night sky, popular as those are. You can fly visually through space and time and view immersive films about the Great Barrier Reef, dinosaurs or Mars. Experience a laser light show set to music from artists like Pink Floyd, Queen and Taylor Swift.

The H-E-B Planetarium in South Texas shows educational films about space, Hernandez says, and others just for entertainment.

Bruton says SFASU designed its planetarium to connect the university with its East Texas community and make science accessible and engaging for all ages. Astronomy students at the university keep track of what’s currently visible in the sky—perhaps a constellation, planet or comet—and program the Digistar system to show it. Immersive shows include *Dark Universe*, which explores dark matter, dark

energy and the structure of the universe, and *Antarctica*, a dive into one of the most extreme environments on Earth.

Abilene presents monthly public shows, and Barber’s favorite is one produced by the European Southern Observatory in Chile, called *Unveiling the Invisible Universe*. It uses actual time-lapse imagery of stars, not a computer model, he says. Another, *Messengers of Time and Space*, shows how astronomers use land-based telescopes along with space-based facilities like NASA’s James Webb Space Telescope, currently orbiting the sun 1 million miles away from Earth, and Hubble, circling 300 miles above Earth since 1990.

“Planetariums give people a sense of perspective,” Hernandez says. “It’s one thing to talk about the scale of the universe, but that 360-degree dome screen does an amazing job of letting you feel it. Watching a film about searching for the edge of the solar system, it really hits you how big the solar system is.”

“Films that go into the universe, dark holes and cosmic matter really put into perspective that we are a blue dot in a grand tapestry of planets and stars. It’s an important and humbling experience.”

Bruton agrees. “Under the dome, phenomena that can seem abstract or distant become tangible and awe-inspiring. It’s like a time machine, looking back at how the universe was.”

So grab one of those comfy chairs at your local planetarium. You’re bound to have a stellar experience. ■

THE FUNGUS AMONG US

The good times just mushroom
when small-town festivals
celebrate local produce

BY PAM LEBLANC • ILLUSTRATIONS BY JIM STARR

I sampled mushroom-flavored soda, chatted with the author of a book about toadstools, admired a roomful of fungus photographs and learned a little about mushroom farming. But the real magic of the Texas Mushroom Festival occurred when I watched a crowd form outside a tent serving portobello mushroom tacos. Was I really still in Texas?

A quick glance at the boots- and hat-wearing folks surrounding me as I strolled the courthouse square in Madisonville assured me I hadn't wandered off course. This city of 4,400, located 40 miles northeast of Bryan, is home to one of several farms operated by California-based Monterey Mushrooms, and in 2005, the Texas Legislature named it the official Mushroom Capital of the Lone Star State.

Madisonville clearly loves fungus, and its annual celebration draws mobs of mycophiles.

The Texas Mushroom Festival is one of dozens of street festivals around the state that celebrate local produce and growers. You can toast tomatoes in Jacksonville, salute strawberries in Poteet and Pasadena, honor onions in Weslaco, praise peaches in Stonewall and Weatherford, recognize rice in Winnie—and a whole lot more.

Many of the events have deep roots in Texas, which is known as a leading producer of specialty crops such as pecans, sweet potatoes, blueberries, watermelons and citrus. Each has its own quirky traditions.

The Texas Citrus Fiesta in Mission, which started in 1932 as a nod to the Rio Grande Valley's winter harvest of grapefruit and oranges, has long included a style show featuring elaborate gowns made from citrus leaves, stems, fruit and peels that have been pulverized, dehydrated, blended and microwaved.

Visitors race to see how many tomatoes they can peel—using only their teeth—at the Jacksonville Tomato Fest. Growers compete to see who can bring the best price for their harvest during the auction at the Poteet Strawberry Festival. The Texas Onion Fest in Weslaco draws more than 25,000 attendees, all who come to celebrate the sweet Texas 1015 onion, the state vegetable of Texas, named for its suggested planting date of October 15.

Washer pitching, mutton bustin' and a full-blown rodeo are part of the action at the Stonewall Peach JAMboree, which also features peach pit spitting and peach eating contests. And at the Luling Watermelon Thump, which dates to 1954, visitors can pucker up for the watermelon seed spitting contest or square off in an (impressively messy) watermelon eating competition.

With all that to choose from, I couldn't resist the idea of spending a fall day in a small town, focusing on something that grows from a microscopic spore into one of nature's most perfect pizza toppings.

The Texas Mushroom Festival officially began in 2001 under a single tent, with a few vendors, a sole musician and about a dozen fungus-themed T-shirts. This year's event, set for October 17, is expected to draw between 10,000 and 15,000 visitors and 150 vendors. The day starts with the Shiitake 5K Run and includes such attractions as a quilt show, an automobile showcase, beer and wine tasting, live music, a kids' zone, silent auction, and mushroom picking contest.

"It just kind of sparked into this monster," says festival director (and confirmed mushroom lover) Dennon Hudson, who was watching the action at last year's event from a sidewalk at the edge of the square, where she waxed poetic about edible fungus. "I love mushrooms any way—fried, grilled, sautéed, raw. And we have lots of pickled mushrooms here as well."

But mushrooms are an acquired taste for some. A few minutes after arriving at the festival on a muggy October afternoon, I spotted Miss Mushroom, Allie Brewer of

Centerville. The 20-year-old pageant winner, wearing a bedazzled silver crown, a rose-colored shirt, gold sandals and a red sash, confessed she doesn't much like them.

"But I'd be up for trying some of them for sure," she added quickly. Then she showed me her finds from a few laps through the festival's mushroom market—a pair of earrings, a shirt and a lavender lemonade snow cone.

Next, I wandered over to the Monterey Mushroom tent, where white, thumb-shaped shrooms sprouted from a mound of soft, dark soil. The farm's growing manager, Armando Juarez, told me that the company's local facility, located about 5 miles south of town, grows white, portobello and specialty mushrooms such as shiitake and oyster. It also makes dried mushrooms. In all, the facility produces more than a half-million pounds of the fleshy, spore-bearing fruits of fungus each week.

"They're extremely healthy," he told me, noting that mushrooms contain vitamin D and potassium. They're also low in calories and rich in fiber.

I learned a few other facts about mushrooms at the festival. Besides coming in handy for cooking—and dang, those portobello tacos were tasty—they're used for medicinal purposes and have been for thousands of years.

At its booth, Viking Farms, based in nearby Normangee, was selling an array of tinctures that purport to ease symptoms of menopause, improve mental clarity and boost recovery from injury. It also was selling a colorful lineup of gourmet mushrooms used for cooking, including pink and blue oysters, black pearl kings, shiitakes, and lion's manes, which look more like softball-sized pompoms than something you'd toss in a sauté pan.

I also learned that unless you're making soup or a liquid-based one-pot meal, you don't have to wash mushrooms. That just makes the caps slimy. Instead, brush off any dirt and wipe them with a damp paper towel.

At another booth I sampled mushroom coffee, which I can only describe as "earthy." (I'll stick to hot tea, thanks.) I perused a display of mushroom honey, a rack of mushroom jerky and bottles of mushroom kombucha. One vendor peddled energy shots made with a root-like fungal structure called mycelium, which looks like a wad of unspooled thread.

I chatted with Alisha Gabriel, author of the picture book *Fungi Are ... More Than Mushrooms*, and spent a few minutes listening to singer Wade Phillips belt out a few numbers next to the courthouse steps.

That's a lot of mushroom madness.

I ended my day at the Texas Mushroom Festival with a full belly and a newfound respect for the funky fungus. Who knew a *lowly* mushroom could do so many things?

The experience reminded me of the importance of Texas agriculture. Food doesn't magically appear in the grocery store; it comes from farms. And Texas farmers work hard to bring their crops to market.

Get out and celebrate them. If you're not into mushrooms, get fired up for Hill Country peaches or East Texas yams. And as a bonus, you'll get a side of small-town Texas, delivered with pride. ■

ALAN
LESLEY

The Future Is Better When We Build It Together

EIGHTY-EIGHT YEARS ago, a group of neighbors came together with a bold idea. If no one else would bring electricity to rural Comanche County, they would build a cooperative and do it themselves.

That decision changed our communities forever. What began as a small rural electric cooperative now provides power to members across parts of Brown, Callahan, Comanche, Eastland, Mills, Shackelford and Stephens counties. While our service territory has grown, one thing has never changed: CECA is still owned by the members we serve.

Today, the challenges look different than they did in 1938, but our purpose remains the same. Every day, we prepare for tomorrow by planning for storms before they arrive, maintaining equipment before it fails and investing in our electric system long before the need arises. We embrace new technologies and make thoughtful investments to ensure we continue providing reliable, affordable and safe electricity for generations to come.

Alan Lesley talks with a member during an annual meeting, illustrating the face-to-face connections that keep CECA in touch with the people it serves.

Why We Gather

There's a reason I look forward to our annual membership appreciation meeting every year.

At first glance, it's an evening to enjoy a meal, conduct cooperative business and visit with neighbors. But it's really about something much bigger: the future of your cooperative.

On Thursday, October 8, we'll gather at CECA headquarters at 349 Industrial Blvd. in Comanche, to reflect on the past year, discuss the future of CECA and share how we're preparing your cooperative for the years ahead.

Registration and dinner begin at 5:15 p.m., with the business meeting following at 6 p.m. I hope you'll make plans to join us.

Your Cooperative, Your Voice

Unlike an investor-owned utility, CECA answers to its members, not shareholders. We're governed by a seven-member board of directors elected by the membership, and each director lives in the communities we serve.

Our employees live here, too. We're your neighbors. We shop in the same stores, attend the same churches and support the same schools.

That local connection means every decision we make is guided by the people we serve, not by outside investors. That guidance starts with you. As a member, you have a direct vote in who leads this cooperative—one of the greatest benefits of belonging to CECA.

The Next Chapter

One of my favorite parts of the evening is visiting with members face-to-face. Those conversations often spark our best ideas because the people who know this cooperative best are the people who own it. Member input has guided CECA throughout its history, and it will continue to shape the cooperative's future.

When our founders organized CECA in 1938, they weren't simply building power lines. They were building opportunity. Before the cooperative, much of the rural areas we serve had no access to electricity. A group of determined neighbors believed their communities deserved better, so they worked together to build something that would outlast them.

Nearly nine decades later, we continue to build on that same foundation. The technology has changed. The electric industry has changed. The needs of our members continue to evolve. Yet the values that built this cooperative remain the same.

We are committed to serving our members with reliable, affordable and safe electricity while embracing the innovations that will strengthen our system for future generations.

The faces have changed over the past 88 years, but the cooperative's purpose has not. CECA has always been about neighbors helping neighbors, communities investing in themselves and members working together for something greater than any one of us.

I invite you to join us Thursday, October 8, for our annual membership appreciation meeting. Come enjoy a meal, visit with friends and neighbors, learn more about your co-op, and help shape its future.

Eighty-eight years ago, neighbors came together to build this cooperative. Today, that responsibility belongs to all of us. I hope you'll join us as we write the next chapter of CECA's story together. ■

A scenic view of a road at sunset. On the left, there are high-voltage power lines and a wind turbine. In the center, a large industrial facility with smokestacks is visible. On the right, there is a water tower and a small town with lit-up buildings. Streaks of blue and green light arc across the sky from the horizon.

You are Invited!

CECA Allocates Capital Credits

AS EACH YEAR comes to a close, CECA allocates capital credits to the accounts of members.

Cooperatives determine each year's margins accumulated from operations and allocate those margins to members' accounts after all co-op expenditures are paid and based on each member's usage.

These capital credits will be returned to members in the future in the form of estate returns or general returns when doing so will not weaken the financial condition of the cooperative, as determined by CECA's board of directors.

In the meantime, the funds are invested in the cooperative plant and credited to each member's account, even if the member moves out of our service territory. That's why it's important for members who depart our service territory to inform CECA of address changes, so capital credits can be returned and not go uncollected when the board approves a distribution.

2025 Allocation Factors

- Residential: 0.06180375
- Single-Phase General Service: 0.07519851
- Three-Phase General Service: 0.05885206

Capital credits for 2025 were calculated by multiplying each member's bill by the allocation factors listed above. For example, if your total annual residential bill from the co-op—consisting of energy billing and power cost adjustment—was \$500, multiply that amount by 0.06180375, so the product is \$30.90. In calculating your total bill, include any security light charge but do not include any tax, service or miscellaneous charges.

If you have any questions concerning these calculations, feel free to contact the co-op office at 1-800-915-2533.

This article is intended to serve as an official notice of allocation of capital credits for 2025. ■

Energy Detective Challenge

School is back in session, and it's time to put your observation skills to work! Complete the challenges below and earn points by finding ways your family can save energy.

Goal:
Score 20 points to become an Energy Detective! After you've earned 20 points, cut out the badge below and display it for all to see!

SCAVENGER HUNT

COMPLETED

- A light is left on in an empty room (2 points) ☐
- A smart or programmable thermostat (4 points) ☐
- A ceiling fan spinning in a room where no one is spending time (2 points) ☐
- A charger plugged in with nothing connected to it (2 points) ☐
- An ENERGY STAR® label on an appliance (3 points) ☐
- A window or door left open or cracked when the heating/cooling system is on (3 points) ☐

MISSIONS

COMPLETED

- Turn off the lights when you leave a room (3 points) ☐
- Open blinds or curtains during the day instead of turning on a light (3 points) ☐
- Unplug a charger that isn't being used (3 points) ☐
- Remind family members to close the refrigerator door quickly (3 points) ☐
- Help your family create a "lights out" check before bedtime (4 points) ☐

Community Calendar

Brownwood

Puffs, September 19–20, 2:30 and 7:30 p.m., Brownwood Lyric Theatre, 318 Center Ave. Ever wonder what it was like to be one of the other students at that famous school of witchcraft and wizardry? This hilarious parody flips the story you know on its head, told from the point of view of the loyal, awkward and underappreciated house that never seems to win the glory. Follow seven years in the lives of the Puffs, a group of well-meaning misfits who just want to make it through magic school without getting caught in someone else's epic adventure. Filled with laugh-out-loud humor, heart and a few spells gone wrong, *Puffs* is a fast-paced comedy for anyone who has ever felt like a side character but still believes in friendship, bravery and finding a place in the story. For more information, call (325) 600-4303.

Little Shop of Horrors; October 16–November 1; Saturdays and Sundays at 2:30 p.m., Fridays and Saturdays at 7:30 p.m.; Brownwood Lyric Theatre, 318 Center Ave. A little shop. A strange plant. A lot of trouble! This delightfully dark musical comedy follows a meek flower shop clerk, a mysterious man-eating plant and the price of fame and fortune. With its 1960s rock 'n' roll vibe, over-the-top humor and toe-tapping songs, this cult classic is both wickedly funny and surprisingly sweet. For more information, call (325) 600-4303.

Cisco

Citywide Fall Garage Sale, September 19, various locations throughout Cisco. The Cisco Chamber of Commerce will hold its annual citywide fall garage sale. Contact the chamber for participating

locations and sale times. For more information, call (254) 442-2537.

Car Show and Pie Fest, October 17, 10 a.m.–2 p.m., location to be announced in Cisco. The Cisco Chamber of Commerce will host its annual car show in conjunction with Pie Fest. Contact the chamber for the exact physical address, vehicle registration and additional information at (254) 442-2537.

Halloween in Cisco, October 31, downtown Cisco and residential neighborhoods. Downtown businesses will welcome trick-or-treaters 4–6 p.m. Residential trick-or-treating will follow 6–8 p.m. For more information, call the Cisco Chamber of Commerce at (254) 442-2537.

Events, dates and times are subject to change. For questions call (254) 442-2537 or email ciscochamberofcommerce@gmail.com.

Comanche

Quanah Parker Day, September 12, 1–4 p.m., Comanche County Historical Museum, 402 Moorman Road. The Comanche County Historical Museum will recognize Quanah Parker as a leader of the Comanche Nation during this special afternoon program. For more information, call (325) 356-5115 or email comanchecountytxmuseum@gmail.com.

Comanche County Pow Wow, September 26–27, Comanche City Park, 1200 Comanche Trail. The two-day community celebration features more than 100 food, craft and commercial vendors, live music, a barbecue cook-off and children's activities. Visitors also can enjoy Ag Land, living-history exhibits, an art and photography show, and performances by the Sahawe Dancers. For more information,

call (325) 356-3233 or email comanchetxchamber@gmail.com.

For more information, contact Comanche Chamber of Commerce and Agriculture at comanchetxchamber@gmail.com or (325) 356-3233.

Lake Brownwood

Reptiles With a Ranger; September 5, 19 and October 3, 17, 31; 2:30–3:45 p.m.; Group Dining Hall, Lake Brownwood State Park, 200 State Highway Park Road 15. Observe and touch several live, harmless native reptiles, including a Texas indigo snake and speckled kingsnake. A park ranger will discuss the animals' biology and ecological importance. Pictures, snake sheds, turtle shells and other materials also will be available. Free with park admission. For more information, call George Dudich at (325) 784-5223 or email george.dudich@tpwd.texas.gov.

Wilderness Survival Hike, Fridays in September and October, 9:30–10:45 a.m., Texas Oak Trailhead, Lake Brownwood State Park, 200 State Highway Park Road 15. Join a ranger to learn about plants, fungi and other resources used by the Comanche, Apache and other Native Americans, as well as early European settlers. The program also explores medicinal plants and their traditional uses, safety and effectiveness. Participants should wear sturdy walking shoes. The program is free with park admission and is weather-dependent. For more information, call George Dudich at (325) 784-5223 or email george.dudich@tpwd.texas.gov.

Master Your Thermostat

Little changes can lead to big savings

THE THERMOSTAT IS one of the most powerful energy-saving tools at your disposal since about half of the electricity used in a typical home goes to heating and cooling. Used smartly, it can bring major energy savings while keeping you and your family comfortable.

During warm weather, the recommended indoor temperature is 78 degrees. During cold weather, set your thermostat to 68 degrees.

A properly configured programmable thermostat can save you 10% on your monthly utility bill. Program your thermostat to match your schedule, turning it up or down a few degrees when you'll be out of the house, at work or school.

A smart thermostat can lead to even more savings, as it allows you to adjust the temperature remotely from your phone. For example, on a hot summer day you can run your thermostat higher while you're out of the house, then cool things off before getting in the car to head home. If your schedule changes day to day, a smart thermostat can give you more control than a basic programmable system.

To keep things running efficiently, regularly clean or replace the filters of your HVAC system. Clogged filters make your system work harder to achieve your preferred temperature.

If you leave on a trip, don't leave the AC on full blast but don't turn it off either. If it's a programmable thermostat, use the "hold" or the "vacation" setting—or set it to 85 degrees. For every degree a thermostat is raised during the summer, you can save 2% on your electricity bill.

Your thermostat can do a lot, but it can't do it alone. A fan can be a great way to amplify the effects of your AC, keeping you cool in the summer. In the winter, adjusting your ceiling fan to turn clockwise can help distribute warm air. Turn off the fan before you leave the room.

Other energy-efficient upgrades to your home help too. Seal any leaks: Caulk and weatherstrip around windows and doors to prevent conditioned air from escaping to the outdoors. ■

DETRY26 | GETTY IMAGES.COM

Capture Energy Savings by Sealing Air Leaks

SAVE ENERGY AND seal air leaks by adding weatherstripping to exterior doors. If you can see any amount of light between the door frame and the floor, weatherstripping should be applied.

This DIY energy-saving project is relatively easy and inexpensive, depending on the type of materials you use. The most common weatherstripping material is self-adhesive foam strips.

Follow these steps to seal any gaps in doorways.

- 1.** Clean the door and doorjamb to be sealed. For best results, weatherstripping should be applied to clean, dry surfaces when it's warmer than 20 degrees.
- 2.** Measure your space twice before cutting the material for greater accuracy. It's best to plan for one continuous strip on each side of the door jamb.
- 3.** Cut long pieces of self-adhesive weatherstripping material (foam, vinyl, etc.) for each side.
- 4.** Apply the material snugly along each side. Make sure the weatherstripping meets tightly at the corners and is pressed firmly onto the doorjamb. The material should compress tightly between the door and doorjamb without making it difficult to shut. ■

The Line in the Sand

Where does West Texas begin? The 100th meridian, more or less

BY W.F. STRONG • ILLUSTRATION BY THE BRAVE UNION

IF YOU EXAMINE any good map of Texas, you'll notice a natural division of East and West Texas that runs from the eastern edge of the Panhandle down to Abilene and San Angelo and on past Uvalde to Carrizo Springs and Laredo.

On the west side of that line is arid land, and on the east side, it's wetter and greener. It becomes increasingly dry as you go west and wet and humid as you go east.

This line is better known as the 100th meridian, and it maintains this calculus of wet and dry lands all the way up into Canada.

John Wesley Powell, famous for exploring and mapping the Colorado River and the Grand Canyon over 150 years ago, was one of the first conservationists to see that the 100th meridian served as a demarcation.

"Passing from east to west across this belt a wonderful transformation is observed," he wrote. "On the east a luxuriant growth of grass is seen, and the gaudy flowers ... make the prairie landscape beautiful.

"Passing westward, species after species of luxuriant grass and brilliant flowering plants disappear; the ground

TCP Listen as W.F. Strong narrates this story on our website.

gradually becomes naked, with bunch grasses here and there; now and then a thorny cactus is seen, and the yucca plant thrusts out its sharp bayonets."

Powell, for whom Lake Powell in Arizona and Utah is named, would become the head of the U.S. Geological Survey in 1881. He used his knowledge of the West to create a prescriptive map for water management.

Powell took his map to a Senate committee in 1890 and suggested dividing the Western U.S. into water districts that would be managed by the people living along the rivers rather than the states. He advocated for need over greed.

The senators practically rioted, as this flew in the face of the fever dream of Darwinian development that had dominated the Western states. The gold must be mined, the forests harvested, the rivers dammed and the railroads built.

Powell argued for sustainability and good stewardship of the Earth. Powell was against big dams—ironic, given that his namesake lake was created by Glen Canyon Dam. He preferred smaller, more democratic irrigation systems that he believed would be more efficient for the land and serve more people more equitably.

As we know, the arid West was not developed as Powell envisioned, but it's interesting to consider what might have been if Powell had had his way.

What's more interesting to me are the facts on the ground these days. The geological truths that defined the 100th meridian in Texas a century and a half ago are now truer for the 98th meridian, running just west of Fort Worth, east of San Antonio and west of Corpus Christi. This tells us that the Texas water challenges of the future will be far greater than any our ancestors faced. ■

Pancakes and Waffles

Breakfast will never be the same after tasting these morning staples

BY VIANNEY RODRIGUEZ, FOOD EDITOR

Growing up, there was always a jar of applesauce in our fridge. One morning we were greeted with apple pancakes, and I haven't looked at applesauce the same since. These are thicker and cakier than your typical pancake, but isn't cake for breakfast simply sweeter?

Apple Pancakes

TOPPING

4 tablespoons (½ stick) butter,
plus more for serving
2 medium apples, cored and diced
¼ cup brown sugar
½ teaspoon ground cinnamon
1 teaspoon salt

PANCAKES

1½ cups complete buttermilk
pancake mix
1 teaspoon ground cinnamon
1 cup cinnamon applesauce
¼ cup water, plus more as needed

- 1. TOPPING** In a skillet over medium heat, melt butter. Add apples, brown sugar, cinnamon and salt. Cook, stirring occasionally, until the apples start to soften and the sugar is dissolved and syrupy, 3–5 minutes. Remove from heat until ready to serve pancakes.
- 2. PANCAKES** Preheat oven to 200 degrees. In a bowl, combine pancake mix and cinnamon. Stir in applesauce and water until just moistened. If batter is too thick to pour, add water. Preheat and lightly grease a nonstick skillet or griddle over medium heat.
- 3.** Pour ¼ cup batter onto skillet or griddle, repeating as allowed for pan size. Cook each pancake until bubbles form on the surface. Flip and cook until the second side is golden brown, 1–3 minutes. Reduce heat to medium-low if the pancakes are cooking too quickly.
- 4.** Keep cooked pancakes warm in preheated oven, and repeat with remaining batter. Serve warm with butter and reheated apple topping.

SERVES 4

TCP Follow Vianney Rodriguez as she cooks in Cocina Gris at sweetlifebake.com, where she features a recipe for Poblano Breakfast Scramble.

Oatmeal Waffles

BEVERLY ANTHES
FANNIN EC

Anthes' easy waffles are a delicious breakfast. They're crisp on the outside and fluffy inside. Serve warm, topped with fresh fruit or maple syrup.

- 1½ cups flour
- 1 cup quick-cooking oats
- 1 tablespoon baking powder
- ½ teaspoon ground cinnamon
- 1½ cups milk
- 2 eggs, slightly beaten
- ⅛ teaspoon vanilla extract
- 6 tablespoons (¾ stick) butter, melted
- 2 tablespoons brown sugar

1. Preheat oven to 200 degrees. In a large mixing bowl, stir together flour, oats, baking powder and cinnamon.
2. In a small mixing bowl, whisk together milk, eggs, vanilla, butter and brown sugar.
3. Add wet ingredients to flour mixture and stir to combine.
4. Preheat and lightly grease waffle iron. Pour batter into waffle iron, close and cook according to manufacturer's directions. Keep cooked waffles warm in preheated oven, and repeat with remaining batter.

SERVES 6

\$500 WINNER

Sweet Potato Waffles

TRACEY STEWART
SAM HOUSTON EC

This is the most delicious way to transform dinner leftovers into brunch. Hearty, crispy and lightly spiced, I was blown away by these waffles. After testing this recipe, you can surely find me cooking up an extra batch of mashed sweet potatoes to whip up these waffles on the weekend.

- 2½ cups flour
- ¼ cup sugar
- 1 tablespoon baking powder
- ½ teaspoon baking soda
- ½ teaspoon salt
- ½ teaspoon ground cinnamon

- 1 cup mashed sweet potatoes
- 1½ cups buttermilk
- 4 eggs
- 1 teaspoon vanilla extract
- ½ cup (1 stick) melted butter, cooled
- Maple syrup, for serving

1. Preheat oven to 200 degrees. In a large bowl, combine flour, sugar, baking powder, baking soda, salt and cinnamon.
2. In another large bowl, whisk together sweet potatoes, buttermilk, eggs, vanilla and butter.
3. Add the flour mixture to the sweet potato mixture and stir to combine, being careful not to overmix. If the batter is too thick, gradually add 2–4 tablespoons water.
4. Preheat and lightly grease waffle iron. Ladle batter onto waffle iron, being careful not to overfill, close and cook according to manufacturer's directions.
5. Keep cooked waffles warm in preheated oven, and repeat with remaining batter.
6. Serve warm with maple syrup.

Pineapple Upside Down Pancake With Pineapple Cream Syrup

JAN BOX
TRINITY VALLEY EC

Dessert for breakfast? Sign me up! I loved the presentation of these pancakes. They do take a little patience when flipping, but once you get the hang of it, these pancakes are so much fun to make—and even better to eat.

1 can pineapple slices (16 ounces) in syrup
1 cup sugar
4 tablespoons (½ stick) butter
6 tablespoons heavy cream
1 teaspoon salt
1 teaspoon ground cinnamon
2 cups prepared pancake batter
Maraschino cherries, for topping
Whipped cream, for topping

1. Preheat oven to 200 degrees. Drain pineapple slices, reserving syrup. To a

saucepan, add reserved syrup and sugar. Cook over medium heat, stirring frequently, at a soft boil about 25 minutes or until syrup turns golden. Remove from heat and stir in butter, heavy cream, salt and cinnamon.

2. Preheat and lightly grease skillet over medium-high heat. Pour about ⅓ cup pancake batter onto skillet.

Don't Overdo It

Take care to mix pancake or waffle ingredients just until combined. A few lumps in the batter are OK. But overmixing overworks the gluten, which results in a dense pancake. Go easy and enjoy tender, fluffier pancakes and waffles.

—Vianney Rodriguez

3. Cook until bubbles form on the surface of the pancake. Place a pineapple ring into batter and press slightly. Flip pancake and press into skillet and finish cooking. Keep cooked pancakes warm in preheated oven, and repeat with remaining batter.

4. Serve warm with a cherry, pineapple syrup and a dollop of whipped cream on each pancake.

COURTESY CHET GARNER

The Mother of All State Parks

Explore history amid peace and quiet along the Leon River

BY CHET GARNER

EVERYONE WHO VISITS Texas' first official state park feels like they've been let in on a quiet secret. This 400-acre hideaway between Temple and Waco doesn't get the attention (or crowds) of Hill Country destinations like Enchanted Rock State Natural Area or Garner State Park.

But from its quiet perch along the Leon River, Mother Neff State Park waits patiently, like a front porch swing, inviting you to slow down and breathe in some fresh air—and maybe put your phone away for a little while.

The story of this park—and really our entire state park system—goes back to Isabella “Mother” Neff and her son, Gov. Pat Neff. The family owned this stretch of riverfront land that became a local hot spot for picnicking, swimming and fishing long before a “state park” was even a thing. When Mother Neff died in 1921, she made a very Texas-sized decision to leave the land to the state so everyone else could enjoy it too. Not a bad legacy.

I started my visit by hitting the limestone trails, winding beneath a canopy of oaks before dropping into a shady ravine. That's where I found one of the park's rock shelters—massive stone overhangs that Native American tribes used for thousands of years. Turns out, good real estate along the Leon River has always been in demand.

From there, I made my way to the park's iconic stone water tower, built by the Civilian Conservation Corps in the 1930s. The climb to the observation deck on top isn't exactly Mount Everest, but it's enough to earn a view of the sprawling valley below—and justify a solid snack afterward.

Mother Neff State Park may not be the biggest or flashiest, but it just might be the most meaningful—a place where history, nature and a mother's generosity quietly collide. ■

ABOVE Chet at Mother Neff State Park, which used to be the property of Gov. Pat Neff's family. Neff held office in the 1920s.

TCP Watch the video on our website and see all of Chet's Explorations on *The Daytripper* on PBS.

Rodeo

Texans young and old love a rodeo. Despite the pain, the mud and the blood, competition and camaraderie keep us coming back for more. Everyone to the main arena; these fearless competitors are ready to ride.

CURATED BY GRACE FULTZ

1 MIKE ZARELLA
PEDERNALES EC

"Youngsters gather on the arena railings for a better view of the opening ceremonies of the Blanco County Fair & Rodeo."

2 HOLLY BUFKIN
BIG COUNTRY EC

"Unwavering grit as this paint bronc shows the untamed heart that defines rodeo."

3 BOB NORRIS

Speaking of Long Commutes

Finding silver linings—and snacks—when it's hard to find childcare

BY ERICA FLOCKE

ILLUSTRATION BY
GWEN KERAVAL

"HOW WAS YOUR day today?"

No response. "Did you have fun?" Still nothing.

At the stoplight on Ranch Road 12 and Hunter Road in San Marcos, I laughed to myself and thought about how silly this one-sided conversation must sound. I glanced in the mirror clipped to the backseat headrest and caught my 13-month-old daughter's grin. She can't talk yet, but I can't wait for the day she finally answers back.

I live and work in Wimberley, a town that prides itself on being family friendly. And it is—except when it comes to daycare. There's only one option in town for babies her age, and I've been on the waitlist for more than a year. So every weekday we make the 30-minute drive to San Marcos, where she goes to daycare. That

adds up to two hours of commuting each day: one hour with my daughter, one hour solo.

We've learned to make the most of it. Together we listen to audiobooks and albums I think she should know. While some babies get *The Wheels on the Bus*, mine gets Turnpike Troubadours. I like to tell myself it's making her smarter, or at least building character. Only time will tell.

I narrate the drive like a tour guide: "Look at that bird!" or "We're going over the river." She probably understands none of it, yet she looks at me and smiles like she's clued in anyway.

Some days, traffic crawls along so slowly that I have to break out the emergency snack stash I keep in the car. Fruit bars or a lone teething cookie. By the time we reach the next stoplight, she's happily munching or asleep.

I notice the same cars each morning and afternoon, their drivers as familiar to me as neighbors at this point. I wonder about the people inside. Do they have a baby in the backseat listening to a Lyle Lovett album for the very first time too?

I imagine a tiny community of parents and children, each of us on our own little journey, connected by the same roads, the same traffic lights, the same shared struggle of making it work.

Sometimes I think about it more broadly. In a state as rural as Texas, countless parents are on even longer drives for childcare, and I can't help but wonder how they fill those hours.

I know this is just a phase. We won't be commuting forever, and one day I know I'm going to miss these drives and how my baby smiled at me from the backseat. But for now, I think my daughter knows every curve of Ranch Road 12 better than most grown-ups. When she does learn to talk, she'll probably have plenty to say about it. ■
